Integration between Test link and Mantis

Step 1:Go to testlink home directory (i.e. C:\wamp\www\testlink).

Step 2:Click on cfg folder.

Step 3:Open mantis.cfg.php file.

     Change below line of code according to database configuration at your end.

     /** The DB host to use when connecting to the mantis db */
     define('BUG_TRACK_DB_HOST', 'localhost');

     /** The name of the database that contains the mantis tables */
     define('BUG_TRACK_DB_NAME', 'bugtracker');

     /** The DB type being used by mantis
     values: mysql,mssql,postgres
     */
     define('BUG_TRACK_DB_TYPE', 'mysql');

     /** The DB password to use for connecting to the mantis db */
     define('BUG_TRACK_DB_USER', 'root');
     define('BUG_TRACK_DB_PASS', '');

Step 4:Open custom_config.inc.php file from testlink root folder.
     Add following line into file in case if you want to integrate with Mantis.
       $g_interface_bugs='MANTIS';

Note:- in case of Other Bug tracking tool specify the name instead of 'MANTIS', and make the
     changes accordingly in cfg/tool.cfg.php (where tool=name of bug tracking application).

Step 5:Restart the apache server to apply the changes.

Verification steps:

Prerequisite :

✔   User and project are created in testlink.
✔   Test plan roles are assigned.
✔   Test Project , Test suits and test case are created in testlink.

Step 1: Click on Execute Tests

Step 2:Select test case (1-1:Login_valid_User)

Step 3:Click on Bug management icon
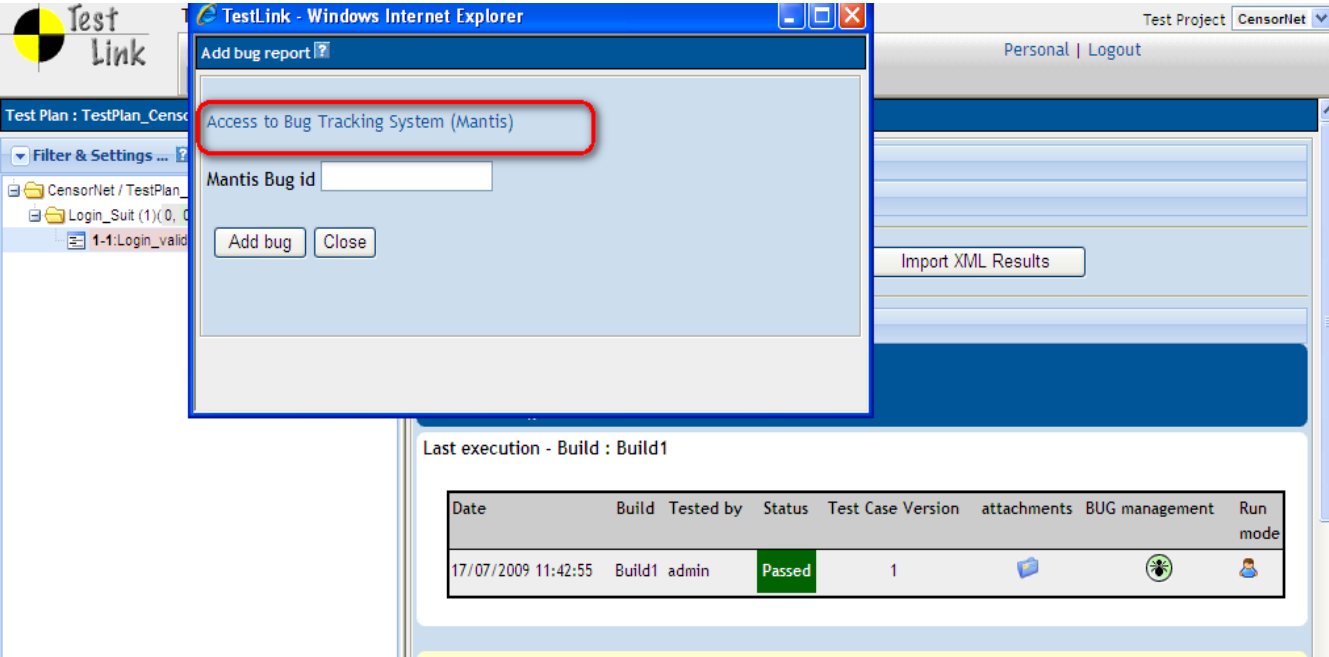

Step 4: Click on "Access to Bug Tracking System (Mantis) " link
